

There will be 4 classes

- PrintJobController
 - This is a controller class and a controller component
 - This is a component that invokes all other problem domain components, such as PrintJob
- PrintJobUI
 - This is the interface class and an infrastructure component
 - The main purpose of this component is to provide the boundary of the system, allowing it to connect with a human actor
- PricingService
 - This is also an infrastructure component
 - Because the price is managed externally, this class also provides a boundary to communicate with those external systems.
- PrintJob
 - This is the entity Class and the problem domain component
 - This class holds the attributes that are essential or need to be processed
 - This entity will be created or updated by the control class.
